

Rheem CLIPS

In addition to our standard range of clips we have the ability to produce alternative clip styles from a variety of materials. Let us know your requirements.

Z95

Type: Z95 hardwire aluminium clip.
For machines: Z95 Clipper.
Typical uses: Closing poultry bags, small netting, small bags, small diameter sausage type products in food, adhesives and explosives.

Z96

Type: Z96 hardwire aluminium clip.
For machines: Z95 Clipper.
Typical uses: Same as Z95, but extra length allows an even larger bag, tube or net to be used.

**100T
100RS**

100T Type: 100 Trapezoidal, a small soft wire clip – 100% aluminium.
For machines: F126LT, C186LT, C185LT, AD187T, D187, RD187, A187T.
Typical uses: Closing poultry bags, small netting for packaging components, small bags for vacuum packaging smallgoods, attaching string loops to salami vacuum bags, manufacturing small diameter sausage type products in food, adhesives and explosives with the double clippers.
100RS Type: 100 Round Section steel clip.
For machines: F126LT, C186LT, C185LT, AD187T, D187, RD187, A187T.
Typical uses: For use where, for safety reasons, aluminium is not acceptable.

**120T
121T**

120T Type: 120 Trapezoidal, 100% aluminium.
For machines: F126LT, C186LT, C185LT, AD187T, D187, RD187, A187T plus the "Able 2000" clipper range.
Typical uses: Same as 100 series, but extra length suits larger bags, tubes or net bags.
121T Type: 121 Trapezoidal, aluminium/magnesium alloy – for greater strength.
For machines: F126LT, C186LT, C185LT, AD187T, D187, RD187, A187T plus the "Able 2000" clipper range.
Typical uses: Same as 120 but the extra strength is suited to heavier products.

150T

Type: 150 Trapezoidal, 100% aluminium.
For machines: F126LT, C186LT, C185LT, AD187T, D187, RD187, A187T plus the "Able 2000" clipper range.
Typical uses: Same as 100 and 120 series, but extra length allows an even larger bag, tube or net bag to be used.

**200TG
201TG**

200TG Type: 200 Trapezoidal Grooved, a medium soft wire clip – 100% aluminium – with a wider and heavier section than the 100 series.
For machines: F226LT, C286LT, C285LT, F225LT, A287LT.
Typical uses: Closing sausage casings and medium sized bags where an airtight seal is not absolutely essential. The groove is on the inside and helps prevent the clip sliding along the casing or bag.
201TG Type: 201 Trapezoidal Grooved, aluminium/magnesium alloy, for greater strength.
For machines: As above
Typical uses: Same as 200TG with the extra strength being an advantage for some products.

210TG

Type: 210 Trapezoidal Grooved, a medium soft wire clip – 100% aluminium – same section and width as 200TG but with shorter legs.
For machines: F226LT, C286LT, C285LT, F225LT, A287LT.
Typical uses: Used on similar but smaller products to 200TG. They have a wider section than the 100 series to give better "clip cut" resistance.

**400TG
401TG**

400TG Type: 400 Trapezoidal Grooved, a large soft wire clip – 100% aluminium – with a groove to prevent slippage.
For machines: F426LT, C486LT, CR486LT, C485LT, F425LT, A487LT, PR484LT.
Typical uses: Closing netting bags, poly bags for chemicals, rocks, bark. Large sausage casings.
401TG Type: 410 Trapezoidal Grooved, aluminium/magnesium alloy – for greater strength.
For machines: As above.
Typical uses: Closing sausage cases where cooking expands product and creates pressure on clip. Closing sausage which is "press tied" by PR485LT, such as pressed ham. Closing bags of heavy product such as rocks, pebbles etc.

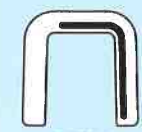

410TG

Type: 410 Trapezoidal Grooved, a large soft wire clip – 100% aluminium – with the same section as 400TG but with shorter legs.
For machines: F426LT, C486LT, CR486LT, C485LT, F425LT, A487LT, PR484LT.
Typical uses: Closing smaller bags, or where user has 400 series machine and needs to close large and small products without purchasing another machine.

450TG

Type: 400 Trapezoidal Grooved, a large soft wire clip – 100% aluminium – with the same section as 400TG but with extra long legs.
For machines: F426LT, C486LT, CR486LT, C485LT, F425LT, A487LT, PR484LT.
Typical uses: As 400TG but the extra long legs allow use on extra large closures.

**Z201
RZ201**

Type: 201 Z Section – a hard aluminium/magnesium alloy clip for maximum flexibility and strength.
For machines: Z210SL, AZ2100L, Z2124 and other starting with Z2 ...
Typical uses: Similar in width to 200TG but much stronger and without groove – so is sensitive to and gives an airtight seal to laminate bags. Used to seal vacuum packages in laminate "Cryovac", "Barrier Bag" and "Globus" "Triplex" bags.
Note: Z201 is not interchangeable with 201TG.

**Z211
RZ211**

Type: 211 Z Section – a hard aluminium/magnesium alloy clip the same width and section as the Z201 but with longer legs.
For machines: Z210SL, AZ2100L, Z2124 and other starting with Z2 ...
Typical uses: Same as Z201 but the longer legs allow for larger packages.

**Z401
RZ401**

Type: 401 Z Section – a hard aluminium/magnesium alloy clip that is wider and has a heavier section than the Z201.
For machines: Z410SL, AZ4100L and other starting with Z4 ... made by Tipper Tie, Union Carbide, Piereider and others.
Typical uses: Closing a larger range of laminate bags than the Z201. Also used for sealing heavy, under pressure, sausage casings.
Note: Z401 is not interchangeable with 401TG.

**Z411
RZ411**

Type: 411 Z Section – a hard aluminium/magnesium alloy clip that is the same width and section as the Z401 but has longer legs.
For machines: Z410SL, AZ4100L and other starting with Z4 ... made by Tipper Tie, Union Carbide, Piereider and others.
Typical uses: Same as Z401 but the longer legs allow for larger packages.

621

Type: 621 soft wire aluminium clip.
For machine: F625LT.
Typical uses: Closing a very large range of laminate bags. Also used for sealing heavy, under-pressure, sausage-type casings.

651

Type: 651 soft wire aluminium clip.
For machine: F625LT.
Typical uses: Same as 621 clips but the larger leg allows for a much larger package.
